Based in Austin, Texas

ABOUT ME

Having the heart of an artist and the mind of an engineer, I design software that builds trust through consistency and solves people’s needs by targeting the right problems and dissolving complication.

The reason for me is simple: people have inherent value and the software they interact with should reflect that.

EXPERIENCE

Selected works on next page

JULY 2024–MAR 2026

Thales

Software designer for an Identity and Access Management (IAM) platform, designing both administrator and end-user experiences, and leading the platform’s design system.

MAY 2023–AUG 2023

Advantis Global at Apple

Data visualization specialist for a fiscal year executive presentation for a group within Apple Services.

JAN 2015–DEC 2021

IBM

Software and service designer focused on helping people make decisions with data and adopt new behaviors across 8 software products, 3 digital experiences, and 3 services.

EDUCATION

AUG 2009–MAY 2014

University of Texas at Austin

BFA in Design coursework included:

- Advanced Syntax in Visual Communication
- Images in Communication
- Design Systems
- Design and Persuasion
- Design and Social Environment
- Human-centered Design

PUBLICATIONS

AUG 2020

DMI:Review, Vol. 31, No. 4

Co-wrote *Design Thinking for Organizational Change* published in the DMI:Review. The case-study demonstrated how the day-to-day work of change management can be maneuvered through a design-thinking approach.

SELECTED PROJECTS

THALES

Self-service Portal X

A cross-device self-service experience, shaped by administrator settings for an IAM platform.

- Worked with Product Management to define user roles, ecosystem boundaries, and a long-term vision beyond the initial release.
- Defined both end-user and admin experiences.
- Translated constraints—such as SCIM 2.0 and cross-application dependencies—into interaction models that kept system complexity from users.
- The platform now has a self-service experience aligned with its capabilities and supports complex configuration without compromising usability.

IBM

Javelin Program X F R

A 12-week design thinking coaching program for IBM’s top 80 client account teams.

- Activated 25 sales accounts to bring a design thinking approach to opportunity development.
- Co-designed a curriculum with workshops, remote coaching, onboarding, and offboarding experiences.
- The program trailblazed design thinking in the sales context and remains a template for similar efforts.
- Resulted in \$1.2Bn in revenue influence, across 233 opportunities, reported by 57 accounts.

IBM

Predictive Customer Analytics (PCA) V X

A cloud-based product for marketing analysts at a time when campaigns need to be personalized and time-sensitive.

- Designed the application architecture, user flows, data visualizations and most elements of the user interface’s layout and components.
- Presented at four out of the five milestone presentations with offering management, development, and executive leadership.
- Brought the product from its initial user and market need framing to its limited release to clients.

THALES

Design System Evaluation X

A structured evaluation of four design systems to clarify tradeoffs and guide a major platform-level decision.

- Defined rubrics for a mature, enterprise-grade design system.
- Evaluated design systems against these rubrics, assessing token architecture, component coverage, accessibility, composability, and feature depth.
- Scoped migration and long-term maintenance for each option with engineering and design leadership.
- The evaluation resolved months of ambiguity around design system direction, aligning leadership on a path forward.

IBM

Content+ reporting V X R

A dashboard for service offering teams that provides visibility into their offering’s readiness and consultant usage.

- Led generative research that surfaced who on offering teams updated content and why, shaping the dashboard's design decisions.
- Designed an alert-based dashboard within Content+ to nudge offering teams to resolve outdated content and strengthen governance.
- Designed a feedback system that enabled offering teams to gather and visualize feedback from sellers across the company.

IBM

Quarter in Review V X

A digital report for service offering leaders that provides visibility into their offering’s readiness, financial performance, and consultant usage.

- Co-designed the report that nudges offering leaders to improve the quality of their offerings.
- Developed the flow and layout of the report and 3 out of the 4 data visualizations.
- Users adopted the report. 60% clicked through the link, 76% of which returned within the week.

IBM

Sponsor User Program X R

An evaluative testing service provided to offering teams participating in a service offering incubator program.

- Designed a service model that embeds into the incubator program and solves the needs for an ecosystem of users.
- Executed a series of pilots over 3 quarters, optimizing user testing methods and service model adoption.
- The incubator program now has a user-centric set of content best practices and a method for continually evolving them.
- The testing service reshaped how the team viewed user feedback, becoming a core part of the program and similar efforts.

MY CAREER IN DESIGN

I am a software product designer with data visualization experience

Over the last 12 years, I’ve worked on 10 software products, 3 digital experiences, and 3 services focusing on helping people make decisions with data and adopt new behaviors.

My approach is based in research and challenging the premises of the brief

My inclination to find root causes has led me to laterally move into lead UX Research positions for 3 years and specialize in qualitative research techniques.

I have the heart of an artist and the mind of an engineer

Form and function always has an overlap. I am unafraid of handling a technical domain, dissolving its complication, and creatively designing a solution.

I hold expertise across the design process and always seek to grow

My curiosity has molded me into a strong t-shaped designer. I’ve held focused roles across UX design, facilitation, user research, visual design, and design strategy.

I know how to maneuver complex organizations and collaborate with teams

I spent 5 years at IBM on 2 design centers of competencies and 2 years at Thales where every project was cross-functional. Plus, I am a certified [Enterprise Design Thinking Coach](#).

I approach projects with autonomy, resilience, grit, and patience

Over multiple projects and managers, I’ve been entrusted to own problems and significant pieces of product experiences with ambitious goals and challenging conditions.

I balance the now with the later

Permeating my view is that there are no solutions, just trade offs. I’ve been at the table for dozens of strategy sessions where bold visions must be broken down into pragmatic steps.

I understand how to frame and present design

Because I’ve presented design at major milestones across 17 products, experiences, and services, I know how to frame work with the right level of fidelity and storytelling for both business and technical audiences.

I know how design within constraints and critical environments

My two years in the security domain shaped how I design, where my solutions had to conform to strict standards and protocols and my decisions carried real consequences.
